**Table.** A summary meta-narrative from positive deviance and similar qualitative studies that contrast clinician styles stratified by positive versus other outcomes.

Setting	Positive outcomes*	Other outcomes*
Collaborative work	Participation, promotion, and advocacy	
	"Passion on the part of physician leaders to continually hit that mark and for the best outcomes"	"Physician presence in championingquality improvement efforts was weak"
	"medical staff organization factors as involvement of the medical staff president with the hospital	"[T]here's not enough physician leadership on the committee"
	governing board, overall physician participation in hospital decision making, frequency of medical staff committee meetings are positively associated with higher quality-of-care" <sup>2</sup>	"You should remember: I don't care about any patients but mine"
	Group decision making	
	"Physicians and non-physicians alike commented on the levelling effect of working together in the coalition, with more equitable participation and engagement among members, who grew more unified as a team. In one hospital, the coalition set a new tone for risk-taking and working on the	"There is still this deference to authoritywe tend to put our physicians up there'our physician said it should be, so it should be." "Opportunities for creativity were constrained by deference to hierarchical relationships; non-physician staff yielded too readily to physicians and

	'leading edge', even if some ideas were not successful."  "Our physician champion, has been much more willing to say, 'I don't know,' and rely on other people, which is something that I don't think he necessarily did a while back."	physicians showed limited respect for diverse expertise." <sup>4</sup>
Clinical work	"Nurses know that they are 100% supported, all the way up to the top of the organization, that they are empowered to call rapids regardless if they're being told not to call a rapid [response]"	"A lot of them are afraid to call the physician. So sometimes the physician would be angry that they called a rapid response"
	"Clinicians frequently discuss difficult cases to solicit the	"I gave you orders, and what are you calling me again for?" 1
	opinions and insights of their colleagues." <sup>6</sup>	"Providerstended to practice without the benefit of their colleagues' opinions."

## **Notes:**

\* Other outcomes include measures of team performance in the study by Hu<sup>3</sup> and tactics previously associated with clinical outcomes at the organizational level by Curry<sup>4</sup>.
